

TMU CANSAT

2026 2027

SPONSORSHIP PACKAGE

INTRODUCTION

WHO ARE WE?

TMU CanSat is an award-winning student design team from Toronto, Canada. Founded in 2006, we design, build, and launch small-scale satellite simulations to tackle real-world aerospace challenges and compete on the international stage.

WHAT WE DO

We design and build our satellites from scratch, integrating sensors, microcontrollers, and structural components through iterative prototyping and testing. Subsystems are developed collaboratively to ensure reliable communication, data transmission, and safe descent, while meeting strict size and weight limits.

WHERE WE WORK

The TMU CanSat office is located in the basement level of Kerr Hall at TMU. Where engineering clubs work, collaborate and compete against each other in competitions.

HISTORY

OUR JOURNEY

2006

TMU CanSat was founded this year, marking the start of our journey in satellite development. In our very first competition, we reached for the sky and captured 1st place setting the standard for everything that followed.

2013

In Abilene, Texas, our team secured 3rd place proving our continued engineering excellence on the world stage.

2014

We carried the momentum forward with a 4th place finish, demonstrating our consistency to perform at a high level year after year.

2016

A defining comeback year, securing 6th after learning and evolving from past challenges.

2018

A historic breakthrough: 1st place, marking the culmination of more than a decade's worth of dedication and perseverance at the highest level.

2019

Another strong performance, earning 2nd place and further solidifying our reputation of engineering excellence.

2020-2022

The COVID-19 pandemic paused our competitive momentum, providing an opportunity to reorganize, strengthen our foundation, and prepare for a focused return.

2024-2025

We won back to back Innovation Awards, celebrating our commitment to demonstrating engineering excellence amongst the TMU design team community.

2026

Our team secured 1st place in Canada! A great display of our teams engineering excellence. Additionally, TMU CanSat won the Advancement award for the 2026 Night of Recognition (NoR) recognizing the outstanding growth of student groups at TMU.

OUR IMPACT

STUDENT BODY CONTRIBUTIONS

FEA

The finite element analysis (FEA) workshop introduced fundamentals and modal analysis in ANSYS Mechanical. The goal of this workshop was to provide students with the skills to model loads, stress and vibrations on different aerospace components.

Intro to Satellites

Students explored real world satellite concepts using a CanSat prototype, and practice with Parametric CAD modeling (Onshape) and programming tools (Arduino IDE). This hands on approach provides students with practical skills that can be used for design groups as well as in their future

Telemetry & Ground Station

This workshop introduced undergraduate students to wireless communication, embedded systems, and telemetry through hands-on experience with real aerospace concepts. Using XBee radios, Raspberry Pi ground stations, and simple sensors, students configured a complete telemetry link to transmit and view live sensor data.

STECI Competition

The STECI (Space Tech Through Education Initiative) - CanSat Competition challenged student teams of 4 to 5 members to complete an engineering project by designing, building, and launching a mini-satellite payload. This provided the students with experience in spatial packaging, system integration, and telemetry management. These practical skills prepares the participants for careers in payload engineering, avionics, flight software, and remote sensing operations.

PARTNERSHIP

ONLINE PRESENCE SOCIAL MEDIA

TMU CanSat's social media page reaches 120,000+ viewers monthly and 2,500+ engaged followers, making it one of the largest and most visible design teams within TMU. By supporting us financially, your brand will be featured across our posts, stories, and events, gaining exposure to a wide tech-savvy student audience.

BRAND EXPOSURE

Your product or service will be used in our 2027 CanSat design, gaining exposure at international competitions and public showcases. Beyond hands-on integration, your brand will be prominently featured across our social media platforms, event banners, project posters, and official presentations. This multi-channel visibility connects your company directly with future engineers who will carry positive experiences with your technology into their careers.

CSR FEATURE

Demonstrate Corporate Social Responsibility (CSR) through a certificate of appreciation and the opportunity to highlight your involvement across your media platforms. Showcase your company's positive impact on students in the STEM field and its commitment to creating opportunities for student professional development.

SPONSORSHIP OVERVIEW

CASH

Cash contributions support essential expenses such as equipment, materials, and competition costs, helping us stay competitive and advance our design.

SOFTWARE

Access to advanced design, analysis, and simulation software enables us to optimize performance, innovate, and build a competitive CanSat.

PARTNERSHIPS

If you have a product, service, or message that you would like our help in sharing, we would love to work with you to help grow awareness for your platform!

HARDWARE

Our CanSat relies on sponsor support to test hardware from launch to descent, showcasing your technology to engineers and future professionals.

DONATIONS

Charitable donations provide vital support for projects and community programs, help drive innovation and social impact, and offer tax-deductible benefits for both individuals and companies.

IN-KIND

In-kind support provides our CanSat team with essential tools and materials that help us build and compete. Instead of monetary donations, we receive physical products that directly support our projects and innovation.

SPONSORSHIP TIERS

	PLATINUM \$2500+	DIAMOND \$1000+	GOLD \$850	SILVER \$700	BRONZE \$500
Invitation to Team Events					
Logo on Team T-Shirt and Website					
Social Media Highlights on Posts					
Company Shout Out on Team Events and Slides					
Sponsorship Mention in all Social Media Posts					
Token of Appreciation					
Larger Logo on Team Merchandise					
Logo Display on CanSat Flight Container					
Additional Requests					

SPONSORSHIP BREAKDOWN

IMPORTANCE

Our team designs, builds, and launches our CanSat from scratch by integrating flight sensors, cameras, avionics, and motors into a structurally sound package.

From hardware and materials to travel, lodging, and competition fees, the cost of a mission-ready season adds up quickly.

Sponsorships make it possible. Your support covers our teams competition logistics, and puts your brand in front of hundreds of student engineers at international competitions and across our 120,000+ monthly viewers.

BREAKDOWN

Hardware & Engineering	40.0%
Travel & Logistics	30.0%
Apparel and Reimbursement	20.0%
Outreach, Media & Office	8.0%
Competition & Conferences	2.0%

BREAKDOWN BY CATEGORY

Hardware & Engineering
40.0%

Software: XBee radios, ground station and avionics antennas, breakout boards- PCB creation, cameras, motors, batteries and sensors

Electrical: PCB fabrication, sensors, cameras, batteries, connectors, soldering equipment

Mechanical: 3D-Printing filament, CNC fabrication, workshop tools, building material, fasteners

Travel & Logistics
30.0%

Competition lodging

Vehicle rentals for team and equipment transport

Apparel
20.0%

Team uniforms and competition apparel

Outreach, Media & Office
8.0%

Promotional stickers, workshop refreshments

Website domain, monitor and misc. supplies

Competition & Conferences
2.0%

Competition registration, conference and booth costs

THANK YOU!

The team at TMU CanSat sincerely appreciates your consideration! We're excited to push the boundaries of hands-on satellite design through innovation, collaboration, and real-world engineering challenges. By supporting us, you become part of a journey that empowers future leaders and showcases Canadian excellence on an international stage!
